

lookserver Features

- ▶ Access i5 5250 applications from any device that supports a browser
- ▶ No changes to i5 applications required
- ▶ lookdirect enables 5250 applications to be supported by i5 Standard Edition
- ▶ Server component installed in minutes, zero deployment clients
- ▶ Create new UIs for thin clients and mobile devices composed from:
 - 5250 applications
 - i5 programs (RPG, COBOL, Java)
 - DB2
 - Other databases including SQL Server, Oracle, Sybase, Access etc.
 - Web services
- ▶ Optimize the look, feel and content for the target device with newlook's drag and drop Designer

Supporting composite applications and multi-channel UIs

Introducing lookserver

lookserver supports composite applications and generates thin client, zero deployment user interfaces. It enables customers to access i5 applications from any device that supports a browser, or from mobile devices including PDAs.

lookserver builds upon the looksoftware dynamic architecture to provide:

- a zero deployment, XML-based UI, supporting browser-based devices including PDAs, requiring zero 5250 OLTP
- an integration layer for connecting the components that make up composite applications

A single looksoftware dynamic repository can support the multi-channel requirements of internal users, external users (partners and customers) and mobile users. i5 customers can use lookserver to deliver the most appropriate UI style without changing existing applications.

Eliminate 5250 OLTP and save!

lookserver supports lookdirect, instantly enabling your 5250 workloads to utilize the batch CPW capabilities of the POWER5™ System i5, significantly reducing hardware costs.

Access your i5 applications anywhere, anytime!

Employees, partners and customers need access to their critical enterprise applications when they don't have access to their office.

Multi-Channel UIs

Internal information workers require the performance, functionality and integration provided by smart clients. On the other hand, business partners and customers may need thin client access, while mobile users are different again.

lookserver, thinclient and mobileclient complement our existing smartclient (or rich client) and liteclient support to give i5 customers a complete UI framework for delivering anywhere, anytime, any channel access, without requiring 5250 OLTP.

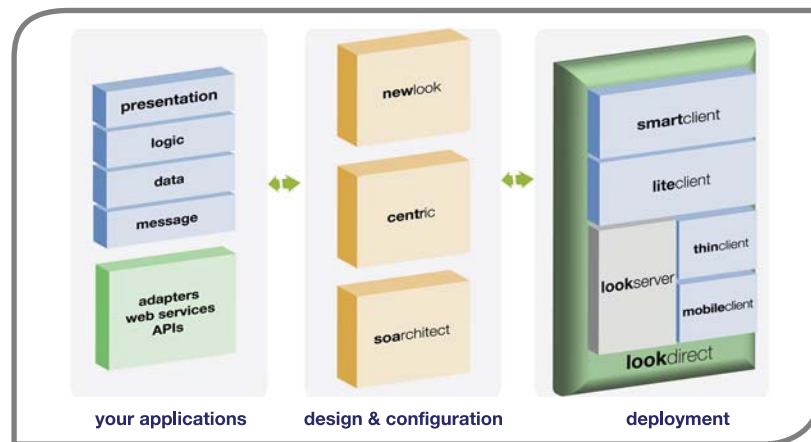

"lookserver's support for mobile access to host applications, allows us to deliver customized UI solutions, optimized for mobile staff like sales people."

Goering iSeries Solutions selected lookserver to extend their smart client access to provide 'anywhere, anytime' support.

Benefits of 'Anywhere, Anytime' Access

- ▶ Reduce costs by instantly modernizing 5250 workloads to consume batch CPW, eliminating 5250 OLTP requirements
- ▶ Reduce costs by delivering self-service applications to employees, customers and partners
- ▶ Improve service by providing 'anywhere, anytime' application access
- ▶ Improve ROI from existing, unchanged applications
- ▶ Increase productivity by giving workers remote access to corporate data and applications
- ▶ Improve customer service with real-time, customized access to host applications
- ▶ Lower costs and improve efficiency by completing transactions faster

Introducing smartclient

smartclient is a client based deployment option built for information workers who require rich UIs, built-in integration and high performance. No-touch deployment and automated updates make **smartclient** deployment a breeze.

smartclient Features

- Sophisticated UI controls
- Rich user experiences
- Desktop integration capabilities
- Web Services consumption
- Easy to deploy and update
- Can function online and offline
- Utilizes local resources

Connect your mobile workforce to host applications

looksoftware's mobileclient delivers pure web-based UIs into the palm of your customers', employees' and business partners' hands. Built on **looksoftware's** dynamic architecture, customized UIs are generated on the fly. **looksoftware's** developer products **newlook**, **centric** and **soarchitected**, enable you to reuse and extend your existing applications and deploy these functions to wireless devices.

They also give you the freedom to optimize your designs for the target wireless device.

mobileclient Features

- PDA devices supporting Windows Mobile and Windows CE, Palm, Symbol etc.
- Access to i5 5250 applications from any wireless device that supports a browser
- Server component installed in minutes, zero deployment clients

Dynamically generate pure web-based UIs

Zero deployment UIs are best suited to external users like partners and customers. Support for most popular browsers, whether running Linux, Mac or Windows, makes thin clients an easy option for instant global access.

thinclient Features

- Supports low level browsers requiring no HTML coding
- No changes to i5 applications
- Optimize the look, feel and content for the target device with **newlook's** drag and drop Designer
- Intelligent browser support
